Get the Headlight Kit that **REALLY WORKS!**

"As a service manager, trainer and consultant of a high end service facility I know my customers and my technicians demand the very best and of course our reputation depends on our quality of service. I have been a fan of Run-Rite products and services for years. So when I offered Run-Rite Headlight Restoration Kit for my techs to sample I was confident of their approval. They had sampled 4 other kits and hands down selected Run-Rite over the others. If the customers love it and the staff loves it they will sell it!!!!!! Thanks Run-Rite, you've done it again."

- George Hoffman (European Motors)

Cloudy, Oxidized, Dimmed

Are Their Headlights Dimmed by a Cloudy or Yellow Oxidation?

According to one news report, "aging plastic headlights - after as little as two or three years on the road, are becoming so 'cloudy' they actually output less light than is needed to legally do their job."

Replacement is costly! The answer is Restoration!

Unobstructed, Clean, Safe

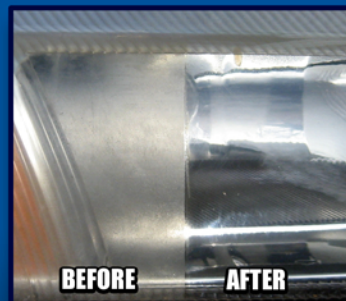

The Problem:

When the plastic lens of a headlight is oxidized over time (sometimes as little as 2 or 3 years), it can become discolored. The formerly clear shiny plastic changes to a cloudy fog or even a yellow tinted color. It looks terrible! But even more importantly - it can be unsafe! If the lens is clouded it prevents the appropriate amount of light from passing through the lens to illuminate the roadway - that means less driver visibility at night!

The Solution:

In the past, the solution was to replace the entire headlight but this can be very costly. Now you can offer the Run-Rite Headlight Service, which restores the headlight to a clear, safe condition at a fraction of the cost of headlight replacement!

- **Remove unsafe cloudy or yellow oxidation**
- **Restore the lens to a clear, shiny & safe condition**
- **Improve nighttime driver visibility**
- **Significant savings over replacement costs**

**New formula
cures rock hard
and like-new
smooth in just
5-7 minutes!**
